

Getting Started with ePM

Web Browsers

Mozilla Firefox is currently the preferred browser for use with ePM. The system will run with Internet Explorer or Google Chrome, but ePM's interactive mapping feature only works in Firefox.

Logging Onto ePM

Point your browser to <http://www.udot.utah.gov/go/epm> . The link to the ePM Logon screen is found in the words "ePM Log On"

Logging On

Enter your user ID and press TAB or ENTER. Enter the temporary password provided to you by the ePM Support person.

The "User Profile Information" page opens. This is where you change your password. Type your temporary password in the "Old Password" box, then TAB down and enter a new password twice. ePM passwords must be a minimum of 8 characters, and one must be a number or a special character. Click the [Save Security] button. You should receive a message "Password successfully changed."

In the "Profile" area of the screen, please update your phone number and e-mail address. This enables you to use the self-service password reset and to receive email from ePM's interactive scheduling and contract features. Click the [Save Profile] button.

Click the [Return to ePM] button to return to the main entry screen. The menu buttons at the right of the screen become active. You are now ready to use ePM.

If you have any questions or comments, please contact the ePM team for assistance at the number below.
